

# UNCOVERING THE HARSH REALITIES OF ENDPOINT MANAGEMENT

BRIDGING THE GAPS IN MULTI-DEVICE SECURITY

We surveyed 1,000 IT professionals about the security landscape and uncovered shocking business threats driving the need to make endpoint management a priority.

Evolving workplace trends and new attack vectors are rapidly increasing the risk of security breaches. **Threats are real** – from Malware to Data Breaches.

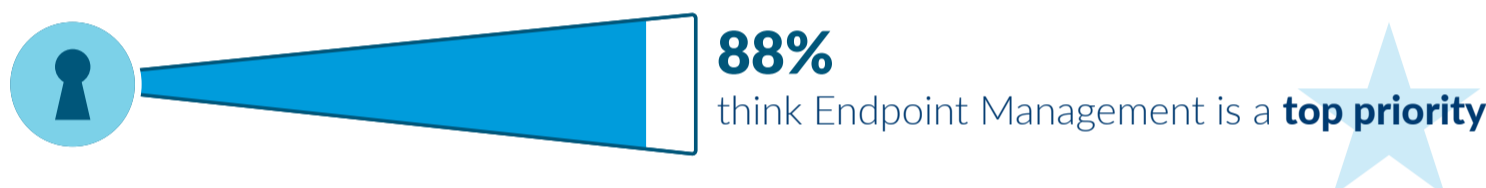

## IT professionals ranked the following as the TOP SECURITY CONCERNS

But only **52% of IT professionals proactively address security concerns** before a breach

**Endpoint management** tools simplify the IT management process and **protect** the organization by allowing a company to **centrally manage, update** and **troubleshoot** all its devices including desktops, laptops, routers, mobile phones, and more.

However, **30% don't even know** how many endpoints they manage!

## SIGNIFICANT RISKS ARE NOT ACTIVELY ADDRESSED!

**52%** are not actively addressing security on **mobile**

**44%** are not actively addressing security on **software**

**29%** are not actively addressing security on **hardware**

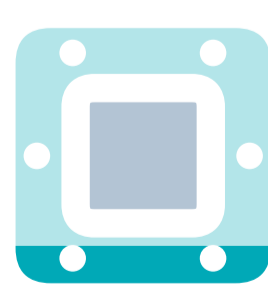

**And the large majority of IT professionals are not using the solutions that can mitigate these risks**

**Only 26%** invest in automated **monitoring and alerts**

**Only 17%** invest in **anti-malware** on mobile devices

**Only 14%** invest in third party **patch management**
