

The Surprising State of IT Security

We talked to 500 IT professionals about IT security at their companies and uncovered four distinct gaps in the current security landscape.

The modern workplace is here. Modern IT practices are not.

Cloud security is one of the **least common** security measures yet **over a third say critical pieces** of their business are in the cloud.¹

Almost 50% of IT teams support iOS yet only 41% support BYOD policies

Only half audit anti-virus management software annually and **a quarter** have NO timeframe for doing so.

TOP 3

security measures taken to protect company information

Firewalls

Anti-virus management software

Employee training and policies

It all comes down to budget.

44%

say that **budget is the biggest threat** to managing the company's IT security

81%

say that **less than 25%** of the IT budget goes to security management

72%

are investing the same amount of money **or less** in security than they were in 2015

TOP 3

uses of security budget

anti-virus management software

firewalls

activity monitoring

People are the problem.

70%

of IT is concerned about **employee behavior** causing security risks but training up employees is not a top priority.

29%

say **employee apathy** presents threats to company security.

Breaches are common, but concern is fleeting.

Two-thirds have suffered a breach in the past.

41% of those were related to Malware

ONLY 30%

believe their company is likely to suffer a security breach or attack

The more security-minded are more concerned about a breach

45%

38%

VS

of those who are confident in their company's security measures are concerned about a breach

of people who are not confident in their company's security measures

86%

are confident that their security measures are effective

30%

of respondents believe there is nothing else they could do to protect the security of their company
