

# Securing every app with LastPass and Okta

When every single login is a potential entryway for hackers, join the universal password management of LastPass with the Single Sign-On platform of Okta for complete security of all credentials.

With the rapid adoption of cloud apps and web services, many businesses are challenged with ensuring employee access is seamless – and secure. In response, businesses have begun implementing Single Sign-On (SSO) solutions like Okta, coupled with multi-factor authentication, to centrally manage employee identities and provide secure access to enterprise-ready cloud apps.

However, SSO solutions leave a gap. In addition to the apps that don't integrate with SSO, there are countless services that employees bring into the workplace without IT's knowledge. Every single login is a potential entryway for a hacker – and needs to be secured accordingly.

Businesses are choosing LastPass to address the gap left by SSO solutions so that all apps in use – those integrated with SSO, those that can't, and those unknown to IT – are all properly managed and secured with strong passwords. As the leader in password management, LastPass has partnered with Okta, the leader in Single Sign-On, to ensure every entry point is properly controlled and secured.

## How LastPass helps businesses using Okta

LastPass provides an out-of-the-box solution to centrally manage all passwords that are being used and shared, whether those services are sanctioned by IT or not.

### Businesses invest in LastPass so they can:

- Address the gap left by the apps and web services that can't support SSO.
- Help IT enforce security controls for introduced apps and web services.
- Facilitate secure password sharing throughout the organization.
- Solve for the co-management of work and personal credentials.

## How we work with Okta

To ease onboarding and management of LastPass, we've partnered with Okta to allow automated user provisioning and deprovisioning through a SCIM API. Our Okta endpoint can be configured for instant creation of LastPass accounts and real-time revocation when employees leave the organization. IT admins benefit from easy, secure administration of LastPass through their Okta directory.

## LastPass delivers the best in password security

When pairing the convenient, universal password vaulting of LastPass with the powerful Single Sign-On platform of Okta, all apps in use across the business can be protected, including those that integrate with SSO, those that don't, and those that IT isn't even aware of. By removing the password burden from employees and providing IT teams with automated, turnkey integrations, businesses using LastPass can feel confident they are safeguarding every password-related entry point.
